

KP SUBMERSIBLE SUMP PUMP

Grundfos KP Cellar/Sump drainage pumps are designed for the removal of domestic (grey) waste water from washing machines, baths, showers, basins, dewatering of construction sites, emptying swimming pools, ponds, fountains, waterfalls and, general transfer duties. Stainless steel is used extensively for vital pump components providing resistance to corrosion and abrasion, as well as sustained performance levels and long life. The wet rotor design enables the pump to withstand dry running for short periods whilst the open impeller construction with slinger and bevelled edge vanes prevents fibres and other debris from jamming the pump. A strainer at the base of the pump permits the passage of particles or solids in suspension up to 10mm in diameter. A wide range of Sewage and waste water AP pumps supplements these pumps-see page 135 for details.

PERFORMANCE RANGE 50Hz
